

CAREER STUDIO

Career Studio Product handoff

Product pitch and launch plan

September 9, 2026

For the next engineer and product owner

Pilot foundation

Start here

Two readers, two paths. Pick yours, then read the part that answers your questions first.

What this deck covers

Three parts: what the product does, what is built and how to run it, how to pilot and sell it.

01

What the product does

Slides 4 – 13

The problem, the customer journey and the product itself.

02

What is built and how to run it

Slides 14 – 22

The launch plan, the system, the code map and the gates.

03

How to pilot and sell it

Slides 23 – 29

Risks, the pilot experiment, the demo, pricing and measures.

01

What the product does

The problem, the customer journey and the product itself.

IN THIS PART

- 5 · The problem and where it came from
- 6 · Why not just use ChatGPT?
- 7 · The customer journey
- 8 · The signed-in dashboard
- 9 · Detailed questions for every skill
- 10 · The interview proposes facts
- 11 · Resumes keep the customer in control
- 12 · Job reviews explain evidence and gaps
- 13 · The tracker preserves the next step

The problem and where it came from

A skill name alone tells us little about the tasks a person can actually do.

THE PROBLEM

“AI,” “accounting,” “programming” or “Excel” tells us little about someone’s work. Which tasks can they repeat independently, and where do they need help?

The details behind each skill should inform the resume and the jobs the customer considers.

THE ORIGIN

The founder wanted to turn a personal job-search CRM and resume interview into a product.

The requirement: ask detailed follow-ups for every entered skill, then reuse customer-reviewed evidence in resumes, job reviews and the tracker.

Why not just use ChatGPT?

You can. Career Studio tests one hypothesis, and the pilot decides whether it holds.

THE HYPOTHESIS

You can use ChatGPT directly.

Career Studio tests whether a reviewed record of what you can actually do, kept in one workflow, saves enough effort to be worth paying for.

CHATGPT DIRECTLY

A valid option for drafting and discussing your experience in conversation.

RESUME DOCUMENTS

Customers can create and maintain their own resumes with familiar tools.

JOB LISTINGS

Customers can find opportunities and compare the requirements themselves.

CAREER STUDIO

A reviewed profile of every skill feeds resume versions, job reviews and the tracker.

The customer journey

Six steps, from the experience the customer already has to a search they can keep track of.

The signed-in dashboard

A populated overview brings the career profile, resume versions and next actions together.

YOUR NEXT CHAPTER

Welcome back, Jamie.

A little reflection today can open up a different kind of tomorrow.

WHAT TO LOOK AT

1

Profile counts: experiences, skills, saved opportunities, resume versions.

2

The opportunities the customer left in progress.

3

Each one carries its stage, note and next follow-up date.

Career Studio · Product handoff · September 9, 2026

Fictional demo. AI examples are simulated.

8 / 29

Detailed questions for every skill

AI, accounting, programming, Excel or a custom skill: each gets detailed follow-ups.

HOW WE ASK

For each skill, ask about tasks, tools, recent use and a real example.

Record independent work, assisted work and learning separately.

AI

Which tools and workflows? How do you check the output? What needs help?

ACCOUNTING

Which tasks and software? Reconciliations, entries or closing? What needs review?

PROGRAMMING

Which languages and projects? What did you write, test or debug yourself?

ANY OTHER SKILL

Add a custom skill. Describe its tasks, when you used it and a concrete example.

The interview proposes facts for review

Choose any skill, explore what the customer actually does, then review each proposed fact.

EVERY SKILL, IN DETAIL

What would you like to explore?

Choose a skill from your story or type anything you know. We'll ask about tasks, tools, real examples, and what you can do with or without help.

1

Ask about this skill

Try a topic: AI tools Accounting Programming Excel Inventory management Procurement Communication

Starting a conversation does not add a skill or assign a level. Confirm the details in Your story before they appear on a resume.

C

Your career interview

Explore every skill, one practical example at a time.

CAREER STUDIO

We can explore any skill: AI, accounting, programming, trades, and more. Here is one sample conversation about Excel. What can you do yourself, and where do you need a colleague or AI to help?

YOU

I maintain stock lists, use SUM and IF, and make a weekly chart. A colleague helps with VLOOKUP. I'm still learning pivot tables.

2

For your review

1 pending

Suggestions become part of your story only when you accept them.

SUGGESTED ADDITION

Clarify your Excel experience

Maintain stock lists, use SUM and IF, and create a weekly chart independently. Build VLOOKUP formulas with colleague assistance; currently learning pivot tables.

3

Based on your details

I maintain stock lists, use SUM and IF, and make a weekly chart. A

WHAT TO LOOK AT

1

Choose an existing skill or type any skill. Examples start questions, not claims.

2

Questions explore tasks, tools, assistance and evidence for the chosen skill.

3

Review the supporting detail before accepting a proposed fact.

Resumes keep the customer in control

Create a draft, edit its wording, approve it and keep the exact version used for an application.

Jamie Morgan

Operations & inventory coordinator

jamie@example.test | Chicago, Illinois

3

SUMMARY

Inventory coordinator with experience maintaining stock records, investigating count discrepancies, and supporting receiving teams. Uses everyday Excel formulas independently and lookup formulas with colleague assistance.

EXPERIENCE

Operations Coordinator | Northline Goods · sample company | Chicago, Illinois

2021 – Present

- Maintain stock records for 1,800 SKUs. Coordinate purchase orders, supplier updates, and weekly cycle counts. Train new team members on receiving procedures.
- Reduced recurring stock discrepancies by 12% after introducing a weekly reconciliation checklist.

Tools used: Excel, inventory management software, purchase orders

Team scope: Train and coordinate three team members; no formal direct reports.

Customer Operations Associate | Juniper Home · sample company | Chicago, Illinois

2018 – 2021

- Resolved order questions, coordinated returns, and maintained customer records. Shared recurring issues with the warehouse team.

WHAT TO LOOK AT

- 1

An approved version keeps its text and cannot be overwritten.
- 2

Download or print the version that was approved.
- 3

The text comes from the reviewed profile; tailoring stays a draft.

Job reviews explain the evidence and gaps

A useful review separates supported experience, missing skills and questions to confirm.

SUMMIT WORKS

Supply Chain Analyst

Remote · United States · USD 78,000–92,000 · full time

[Read the posting](#)

Save opportunity

Review again

Limited relevance

A comparison, not a prediction of an offer.

Sample review: inventory knowledge is relevant, but the required independent analytical skills are not supported by this sample profile.

Experience that connects

- Inventory and operations coordination — Maintain stock records for 1,800 SKUs. Coordinate purchase orders, supplier updates, and weekly cycle counts.
- Everyday spreadsheet work — Basic formulas and maintaining lists are recorded as independent.

Known gaps to consider

- Independent SQL and advanced Excel — SQL is not documented. VLOOKUP is assisted and pivot tables are still being learned.

Still needs checking

- This is a fictional posting, not an active opening.
- Exact location, work authorization, software requirements, and guaranteed starting salary need employer confirmation.

Useful follow-up questions

- Would you like to focus on coordinator roles while building analytical skills?

Create a tailored resume

WHAT TO LOOK AT

- 1

A comparison, not a prediction of an offer.
- 2

Supported experience, tied to what the profile records.
- 3

Known gaps name the skill and how it was recorded.

The tracker preserves the next step

Save an opportunity with its stage, notes, follow-up date and approved resume version.

YOUR NEXT CHAPTER

Find opportunities

Keep your next steps together.

Track the opportunities you choose, the resume you use, and the follow-up that matters.

Resume used

Cedar & Co. · Inventory Coordinator

Your notes

Sample: conversation with the operations lead on Thursday. Prepare the cycle-count improvement example.

Save updates

You decide when and where to apply. Nothing is sent from this tracker.

WHAT TO LOOK AT

- 1 Stages represent customer-entered progress.
- 2 The stage and next follow-up date stay with the opportunity.
- 3 The approved resume version used is recorded.

02

What is built and how to run it

The launch plan, the system, the
code map and the gates.

IN THIS PART

- 15 · What is built and what remains
- 16 · The accepted launch plan
- 17 · AI access at launch and later
- 18 · The current system
- 19 · Where the next engineer works
- 20 · Rules to preserve in every refactor
- 21 · The pilot hosting model
- 22 · Launch work in dependency order

What is built and what remains

Six capabilities are implemented in the product. Six more are launch work.

IMPLEMENTED IN THE PRODUCT

- Accounts and private records
- Resume intake and detailed profiles
- AI adapter with approval steps
- Resume versions and job reviews
- Application tracker and backups
- Account-free demo

REQUIRES LAUNCH WORK

- Live AI and hosted validation
- Monitoring and recovery operations
- Customer privacy and support flows
- Broader licensed job coverage
- Billing and paid entitlements
- Email verification and reset

The accepted launch plan

The sequence represents dependency gates, not promised dates.

AI access at launch and later

Customers should be able to use the product without managing an API key or buying a separate ChatGPT plan.

CHOSEN FOR LAUNCH AI runs through the product's own API account.

DEFERRED · NOT IMPLEMENTED

Customer's own ChatGPT subscription

A research track, not a launch feature.

CHATGPT LINK, LATER

- Explore an official account connection only.
- Resolve production support and isolation first.
- Provide disconnect and limit recovery.

Subscription linking is not implemented and is not included in launch claims.

The current system

One authenticated Node.js service controls access and stores the customer's approved work.

Model responses never decide account ownership. Every private read and write is scoped to the signed-in owner.

Where the next engineer works

Each row points at existing code, not a new implementation task.

PATH IN THE REPOSITORY	WHAT IT OWNS
server.js	Routes, identity and request controls
lib/store.js + auth.js	Owner-scoped data, sessions and recovery
lib/ai.js	Interview, review, tailoring and evidence checks
lib/resume-model.js	Profile, skill catalog and resume text
lib/documents.js + jobs.js	Document workers and job feed
public/ + tests/	Customer UI, demo and behavioral checks

Rules to preserve in every refactor

Four behaviours must survive any rewrite of the code beneath them.

The pilot hosting model

One HTTPS-fronted Node process, a private SQLite volume, and recovery tested before pilot access.

ONE APPLICATION PROCESS

HTTPS proxy, one Node process and a private persistent SQLite volume.

- Configure server secrets and a verified API model.
- Keep the application port private.
- Confirm customer ownership checks on the host.

RECOVERY AND OPERATIONS

Monitor service failures, disk space, provider usage and backup age.

- Schedule encrypted backups off the host.
- Test restart and restore before pilot access.
- Design shared storage and limits before adding replicas.

Launch work in dependency order

Four milestones group the eight launch gates. No dates are committed.

YOU ARE HERE

03

How to pilot and sell it

Risks, the pilot experiment, the demo, pricing and measures.

IN THIS PART

- 24 · Known risks and the pilot tests
- 25 · The first customer experiment
- 26 · The sales conversation and demo
- 27 · Packaging and pricing experiments
- 28 · Measures for the pilot decision
- 29 · A verified pilot is the next milestone

Known risks and how the pilot tests them

The founder's current assessment. Each risk has something the pilot can measure.

The cost per active customer is unmeasured.

ECONOMICS

- Default controls cap attempts, not dollars: 40 per customer per day, 400 service-wide, 3 concurrent.
- Record tokens and cost per customer before any price is set.

Job coverage is remote-only and 24 hours delayed.

COVERAGE

- Operations and coordinator roles are often local.
- Test pasted postings and evaluate licensed local coverage before a discovery pitch.

AI can still overstate what a customer has done.

ACCURACY

- Evidence checks and approval reduce errors; they cannot prove truth.
- Count corrections per draft and investigate every invented fact.

The first session may be too long to finish.

EFFORT

- Measure time to a first approved resume.
- Review friction after three participants and shorten the first-use path.

The first customer experiment

Proposed pilot: recruit 8–12 active job seekers in operations and coordinator roles.

This is a research cohort, not current traction.

Begin live customer intake only after the pilot readiness and privacy gates.

The sales conversation and demo

One question opens the conversation. A five-minute demo answers it.

OPEN WITH THIS

“What part of your experience is hardest to explain on a resume?”

THEN SHOW THESE FIVE THINGS

- Choose a skill the customer wants to explain.
- Show tasks, tools, help and a real example.
- Explain one job match and one gap.
- Record the next step in the tracker.
- Connect the example to a resume claim.

Packaging and pricing experiments

Sell the reviewed profile and the organized search. Prices remain a decision after pilot evidence.

EXPERIMENT A

A monthly plan for an active search, with a stated AI allowance and clear cancellation terms.

WHAT IT TESTS

- Whether the offer is understood.
- Willingness to pay and repeat use.
- Reasons for cancelling.

EXPERIMENT B

A fixed 30-day search package that starts with resume setup.

WHAT IT TESTS

- Completion of a first approved resume.
- Preference tied to expected search length.
- Support demand per customer.

Billing is not built. Hosting, AI, job data, processing and support remain operator costs until pilot evidence sets a price.

Measures for the pilot decision

Proposed instrumentation and research measures, not current product analytics.

MEASURE	WHAT IT RECORDS
Activation	Approved resume + useful saved opportunity
Time to value	Time and help needed to complete that journey
Accuracy	Corrections to proposed claims and skill levels
Search usefulness	Saved opportunities the customer would pursue
Return use	Customers who update the tracker next week
Economics	AI usage, support time and willingness to pay

A verified pilot is the next milestone

Two week-one instruction flows, one for each reader.
